

# MANAGING RISK IN A MOBILE WORLD

Mobile devices are outpacing native PC sales at a tremendous rate. People are doing business everywhere with a plethora of devices. Additional risks associated with Bring Your Own Device (BYOD) are the high loss rate of smaller devices, co-mingling personal & business data, jailbroken/rooted systems, and significant changes for helpdesk & operational staff. Nth provides end-to-end solutions for the mobile device megatrend.

- How are you validating mobile applications are free of vulnerabilities?
- Are you embracing the Mobile megatrend with a warm security blanket?
- How are you addressing the human security risk of mobile devices?

## Mobility Solutions

### Mobile application Security training

Vulnerability & Patch Management processes have matured in many organizations, which causes attackers to move toward attacking the applications. Nth Generation can conduct application security testing to ensure your applications are securely written and deployed.

### Mobility Program Development

Nth's Mobility Program includes development of policies, governance, operating procedures, Mobile Device Management (MDM) solution implementation, and training.

### Policy Development

Policies document management's expectations on how technology and information are to be utilized. Nth Generation can develop policies to enable your organization's mobility initiatives.

### Mobile Device Management Solution Integration

These solutions provide the security controls necessary to mitigate risk. Nth Generation can assist with requirements gathering, solutions development, and integration of the leading MDM solutions.

### Mobile Device Security Awareness Training

Humans are often the biggest threat to information security. Risky online behavior can be costly. Nth Generation provides on-site training to end-users or train-the-trainer solutions to ensure your security policies are effectively communicated.
